# HiWATER: Land cover map of Heihe River Basin

## Abstract

The datasets of “Land Cover Map of Heihe River Basin” provide monthly land cover classification data in 2012-2013. The HJ-1/CCD data with both high spatial resolution (30 m) and high temporal (2 days) frequency was used to construct the time series data. The NDVI curves from the time series HJ-1/CCD data can depict the variation of typical land surface. Different land use type has different NDVI curve. Rules were set to extract every land use type information. The datasets of “Land Cover Map of Heihe River Basin” hold the traditional land use types including water bodies, urban and built-up, croplands, evergreen coniferous forests, deciduous broadleaf forests and so on. Crop type classification (including maize, spring wheat, highland barely, rape and so on), snow and ice and glaciers information updates, make the datasets more detailed. Compared with previous land cover map and other products, the classification result of the datasets is visually better. Especially in middle stream, the accuracy of crop classification is quite high compared with the data from the ground campaign. The accuracy of land cover map of the datasets in 2012 was evaluated using very high spatial resolution remote sensing data within Google Earth and data from campaign, and the overall accuracy can be as high as 92.19%. In a word, the datasets of “Land Cover Map of Heihe River Basin” is not only high in overall accuracy, but also more detailed in crop fine classification. Furthermore, it updated some new classes like glaciers and snow. The datasets of “Land Cover Map of Heihe River Basin” are consequently the classification datasets with the highest accuracy and most detailed information up to now.

## Keywords

Theme: land use, land cover, CCD time series data, crop fine classification, satellite remote sensing data products, HJ-1, vegetation type,  
Place: Heihe River Basin,  
Temporal: 2012-01 to 2012-12, 2013-01 to 2013-12, 2012, 2013,  
Discipline: satellite remote sensing,  
Statrum:

## ISO 19115 Category

Category: geoscientificInformation

## Detail

Scale: 30

Project: UTM Zone47N WSG-84

Data Volume(MB): 11439

Data Format: \*.tif

## Position and Thumbnail

## Temporal Range

Start: 2012-01-01

End: 2013-12-31
